                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    gonadoliberin I precursor - sharptooth catfish
N.Alternate names: gonadoliberin, catfish-type; gonadotropin-releasing hormone I (GnRH-I)
N.Contains: gonadoliberin I; gonadoliberin I-associated protein form I; gonadoliberin I-
C;Species: Clarias gariepinus (sharptooth catfish)
C;Date: 30-Sep-1993 #sequence-revision 18-Mar-1997 #text_change 18-Jun-1999
C;Accession: $45602; $45601; JC1242; $42936; $4397 #text_change 18-Jun-1999

                                                                                                                                                                                                                                                                                                                                                          The invention relates immunogenic composition for eliciting an immune response to luteinising hormone releasing hormone (LHRH). The composition comprises a LHRH-diphtheria toxoid (DT) conjugate adsorbed to an ionic polysaccharide. The LHRH-DT compositions can be used for regulating onestrus cycling in a female animal or for inhibiting characteristics induced by the sexual maturation of an animal, e.g. aggression or sexual activity. They can also be used for achieving production gains in livestock, e.g. reduction or elimination of unwanted craduction dains in livestock, e.g. reduction or elimination of unwanted craducting the growth of cells which are regulated directly or indirectly by LHRH, e.g. malignant breast cells, malignant prostate cells, malignant voarian cells, malignant oncofoctal cells, malignant confoctal cells, in a nammal. They can also be used for inhibiting pregnancy, prostate
                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                        against LHRH results in prevention of the release of the hormones LH and FSH from the anterior pituitary. Sequences AAW94890-93 are peptide
                                                                                                                                                                                                                                   enlargement, endometriosis or inflammatory responses. The LHRH compositions induce a more effective immune response against LHRH than the LHRH-carrier-adjuvant compositions. The effective immune response

The present sequence is a peptide fragment of human luteinising hormone releasing hormone (also known as LHRH, GRRH and gonadotrophin releasing hormone). It was used to demonstrate the novel adjuvant of the invention, which has lower reactogenicity then previous compositions. Vaccination of humans and animals against LHRH can be used as a method of fertility control, as well as enabling the control and treatment of disorders of the reproductive organs, such as testicular, breast, prostate and ovarian cancers, prostate enlargement and endometriosis. The composition of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                        invention contains an anionic macromolecule and a saponin component, the latter of which is an immunostimulant, and it can also be used with other immunogens including soluble protein antigens, peptide haptens conjugated to a carrier protein and whole viruses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (LHRM). It is used in vaccines with T helper cell epitopes AAB08076-B08101, derived from canine distemper virus (CDV). Compositions comprising these T cell helper epitopes are useful for inducing an immune response in an animal. The epitopes are useful as components of animal, in particular, canine vaccines, either simply as synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel T helper cell epitopes derived from canine distemper virus useful for preparation of canine vaccines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Amino acid sequence of truncated luteinising hormone releasing hormone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents luteinising hormone releasing hormone

The present invention relates to a product comprising a proliferatively active moiety (PAM) linked to nucleic acid material which is associated with a protective material. The PAM product is useful for manufacturing a medicament for treating e.g. an autoimmune disease, transplant rejection, retroviral disease, graft-versus-host-disease, or lymphoproliferative disease, comprising cells bearing a high affinity receptor for PAM. The present sequence is a peptide of gonadotropin-releasing hormone (GRRH). GRRH is a peptide hormone, which has high-affinity receptors, and therefore can be used in the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel product comprising proliferatively active moiety linked to genetic material, useful as vectors for protected nucleic acid material and as mitogen to stimulate proliferation of target cell -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Luteinising hormone releasing hormone (LH-RH) related peptide SEQ ID:153.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (III) and a reactive group (II) (e.g. succinimidyl and malelmido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptide composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various discorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Modifying and attaching therapeutic peptides to albumin prevents peptidase degradation, useful for increasing length of in vivo activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases intracellular uptake and interference with physiological processes. AAB90829 to AAB92441 represent peptides which can be used in the exemplification of the present invention.
                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Protection, endogenous therapeutic peptide, peptidase, conjugation, blood component; modification; succinimidyl; maleimido group; amino; hydroxyl; thiol; hormone; growth factor; neurotransmitter.
peptide based vaccines and as additions to vaccines containing more complex antigens.
                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Thibaudeau K;

A composition is claimed containing LHRH or its analogues. The composition is used to treat prostate adenocarcinoma, benign hypertrophy of the prostate, endometriosis, dysmenorrhea, hirsutism, hormone-dependent mammary tumours, for treatment or prevention of precocious puberty, delaying the onset of puberty and for treating acce. The compositions may also contain antiandrogens.
                                            LHRH; Follicle Stimulating Factor; FSH; acne; hirsutism; dysmennorhea; precocious puberty; endometriosis; prostate cancer; benign prostate hypertrophy; mammary tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  LHRH; Follicle Stimulating Factor; FSH; acne; hirsutism; dysmennorhea; precocious puberty; endometriosis; prostate cancer; benign prostate hypertrophy; mammary tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                              LH-RH, liberating factor for LH and FSH, and its agonists compsn. - used to treat prostate adenocarcinoma, benign hypertrophy of the prostate, hirsutism, acne, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      100.0%; Score 58; DB 2; Length 10; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The inventors claim a compsn. for the redn. or prevention of undesired prostatic growth in males. The compsn. contains a decapeptide (gonadoralin) (AAP10097) with an appropriate vehicle or support. The compsn. is used for treating e.g. benign prostatic hyperplasia by parenteral admin. in daily doses of 0.035-11.0 (pref. 0.080-2.0) mg/kg. Gonadoralin is the generic name for LH-RH and is described in US3835108. In the example s.c. injection of the compsn. significantly reduced the wt. of seminal vesicles and ventral prostate in rats without affecting the wt. of the

                                              The claimed peptide antagonists inhibit the release of gonadotrophins and/or steroids. They are antagonistic to GnRH, inhibit ovulation, and may cause resorption of a fertilised egg if administered shortly after absorption. The peptides also have utility in male contraception, and in treatment of precoscious puberty, hormone dependent neoplasia, dysmenorrhoea and endometriosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

This results in an increase in oral activity. It is useful for eg male and female contraception, treatment of precocious puberty and endometriosis and treatment of breast- and prostate tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Orally active luteinising hormone-releasing hormone peptide analogues - have keto:methylene or hydroxy:ethylene in place of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /note= "other= ketomethylene(Gly), dihydroketo-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The gonadotropin releasing hormone and its analogues are prepd. by a new multistage rapid peptide synthesis method in soln., where the intermediates are not isolated. The process is rapid and gives very pure peptide quickly and using little equipment. The peptide can be used in veterinary medicine to synchronise ovulation in large animal herds, and in human medicine in the treatment of fertility disorders.

```
The C-terminal residue (Gly-CO-NH2) can be replaced by ethylamide. This peptide and fragments of it (i.e. amino acids 4-10, 5-10, 6-10 and 7-10) are agonists and antagonists of LHRH. They are useful for treating e.g. preoccious or delayed puberty, psychiatric disorders esp. those of the libido or sexual aggression, etc. In addition they are useful for functional exploration of the hypothalamus-hypophyseal axis and for radioimmunological or biological assay (of LH, FSH and steroid levels) in biological fluids and biopsy samples.

    used to treat gynaecological conditions, cancer of gonads and
sec. sexual organs, psychiatric conditions and in assays

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New peptide homologous with luteinising hormone-releasing
                                                               Peptide #1 with homology to LHRH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 3; Page 50; 83pp; French.

A therapeutically effective amt. of such an antagonist is contained in a pharmaceutical compsn. alongside a menopausal symtom-alleviating amt. of a 19-nor progestational agent (II) (pref. both in single formulation). The compsn. is pref. administered nasally in dosages of 0.01-1 mg/kg/day for (II). May be used for inhibition of ovulation, and treatment of gendometriosis, breast cancer, polycistic ovarian disease, or precocious puberty in female mammals.

N.Alternate names: gonadoliberin-associated protein (GAP); gonadotropin releasing hormory
N.Contains: gonadoliberin-prolactin release-inhibiting factor
N.Contains: gonadoliberin: prolactin release-inhibiting factor
C.Specias: Rattus norvegicus (Norway rat)
C.Spate: 31-Mar-1988 #sequence_revision 31-Mar-1988 #text_change 18-Jun-1999
C.SAccession: A40147; B26173; A48410

A.Description: stimulates pituitary secretion of lutropin and follitropin
A.Note: gonadoliberin-associated protein may have prolactin release inhibiting activi
C.Superfamily: gonadoliberin
C.Steywords: amidated carboxyl end; hormone; hypothalamus; placenta; pyroglutamic acid
F.1-23/Domain: signal sequence #status predicted <SIG>F:24-92/Product: progonadoliberin #status predicted <PGN>F:24-33/Product: poroladoliberin #status predicted <GN>F:37-92/Product: prolactin release-inhibiting factor #status predicted <PIF>F:37-92/Product: prolactin release-inhibiting factor #status predicted <PIF>F:24/Modified site: pyrrolidone carboxylic acid (Gln) (in mature form) #status predic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RiLovejoy, D.A.; Fischer, W.H.; Parker, D.B.; McRory, J.E.; Park, M.; Lance, V.; Swan Regul.
